Education

Thapar Institute of Engineering & Technology

Bachelor of Engineering in Computer Science & Business Systems

Expected 2027

CGPA: **8.2/10.0**

Indus Public School, Jind

Class 12th – CBSE Board

2022

Scored: **92.8%**

Indus Public School, Jind

Class 10th – CBSE Board

2020

Scored: **95%**

Experience

Full-Stack Developer

Jan 2025 – Present

Talkeys (Startup)

- Engineered a high-performance, scalable **event booking platform** using Next.js, Express.js, and MongoDB, supporting 5,000+ monthly users and reducing system latency by 30%.
- Integrated secure **payment and authentication systems** including Razorpay, OAuth 2.0 (Google/GitHub), JWT, and role-based access control, improving transaction security compliance by 40%.
- Redesigned the user interface with **React.js/Next.js**, increasing user engagement and customer retention by 25%.

Projects

LedgerX — AI-Powered Financial Transaction System

GitHub

Next.js, Node.js, PostgreSQL, Prisma, HuggingFace, LangChain, Docker, AWS EC2

- Engineered a **cryptographically secure double-entry ledger system**, enhancing financial integrity and achieving **100% audit readiness** in simulated assessments.
- Integrated **Hugging Face DistilBERT**, reaching **95% transaction classification accuracy**, cutting manual verification time by **60%**.
- Implemented a **CI/CD pipeline** with Docker + AWS EC2 + Nginx reverse proxy, reducing deployment time by **70%** and ensuring **99.99% uptime**.

AI-Powered Agile Management Platform

GitHub

Next.js, TypeScript, OpenAI GPT-4, Pinecone, LangChain, Redis, Redux

- Developed an enterprise-grade project management platform integrating Redis caching (75% fewer DB queries), and vector-based semantic search (90% faster retrieval), improving sprint cycles by 60%.
- Architected scalable **AI infrastructure** with Redis queues, Pinecone DB, and AWS CI/CD pipelines (GitHub Actions), achieving 99.9% uptime, 200ms API latency, and 85% cost efficiency.
- Engineered secure **authentication system** with JWT + Google OAuth and Redux Toolkit for 15+ components, ensuring 99.7% session reliability and 40% faster login performance.

ScholarAI — Autonomous Research Agent

GitHub

Python, LangChain, HuggingFace, FAISS, OpenAI, CLI

- Developed a scalable research pipeline using LangChain + FAISS, doubling literature discovery throughput from **5,000 → 10,000 papers/month**.
- Built a CLI-based tool to process and summarize over **10,000 academic papers concurrently**, improving data accessibility by **80%**.
- Integrated **OpenAI + Hugging Face embeddings** for semantic search, reducing API calls by **60%**, improving response time.

Technical Skills

- Languages:** JavaScript, TypeScript, Python, C++
- Frontend:** React.js, Next.js, Tailwind, ShadCN UI, Framer Motion
- Backend/DB:** Node.js, Express.js, PostgreSQL, MongoDB, Prisma, SQL
- AI/ML:** HuggingFace, LangChain, LLM Prompting, Groq/OpenAI APIs
- DevOps:** Git, Docker, GitHub Actions, AWS EC2,S3 Render, JWT, OAuth, WebSockets

Achievements

- Led a team to the finals of **Google AI Agent Day (Bangalore)**, demonstrating leadership in building agentic AI solutions.
- Scored **97.8 percentile in JEE**; awarded Merit-II scholarship at Thapar Institute.
- Completed **Fullstack + DevOps Bootcamp (100xDevs)** and **LangChain course (DeepLearning.AI)**.
- Qualified the internal SIH round-2025 amongst 190 teams.
